Designing:

Adobe Illustrator, photoshop, Figma,
AdobeXD, UI/UX Principles

Programming Languages:

Java, Python, Apex, Javascript

Front-End Development:

UI/UX, HTML, CSS, TailWind CSS, ReactJS,

Back-End Development:

NodeJS, ExpressJS

Databases:

MongoDB, firebase

Misc.

Git, RestFulAPI

UI/UX PROJECTS

InTour:

- InTour is a modern mobile app with a captivating and intuitive interface, redefining travel planning. Explore a vast database of tourist agencies, detailed destination info, and interactive maps. Personalize trips with robust filters, read reviews, and join a community of travel enthusiasts. Embrace style and functionality for seamless vacation curation.

Video Call Application

- This application is used for video calling from anywhere using reactjs as front-end framework.
- A P2P web application using webRTC library which doesn't require any additional server or database for its functionality.

ATG Hotels:

- This case study about the hotel booking app is quite simple and a fascinating task. This app is for customers who want to book hotels in their specific areas by knowing each and every detail about the hotel.

Chat:

- I have designed a stunning chat application UI in Figma, showcasing an exceptional dark mode theme. The overall aesthetic is pleasing, with a harmonious blend of colors, typography, and visual elements that exude sophistication. The dark mode not only enhances the visual appeal but also contributes to a more comfortable user experience by reducing eye strain.
